### Speciation - Practice Test Questions & Chapter Exam ...

Divergent evolution describes the accumulation of distinct traits that can lead to speciation events. A large population consists of a single ancestor species. Over time, different groups of the population come to inhabit different niches and develop traits for specialized inhabitation of that niche.

### Unit 4 Populations & Environment Selection & Speciation ...

a) Speciation is the process by which reproductively isolated population evolve to become distinct species. So by using this concept many new species can be identified. If two species are morphologically different then if this concept is applied it can detect the divergence and existence of two species as it considers the genetic variability. So speciation would be easy.
